ER131 Poster Guidelines
Date: Dec 3, 2019
Author: Duncan Callaway

Background: The poster session will be December 17 from 3-6p. Kvamme Atrium in Sutardja Dai Hall 3rd floor.

Format: Please use the template in this directory. You can change design aspects but:

- Keep the same overall dimensions
- The fonts must not be smaller than what is in the template
- A title is required
- Your names and emails should be in the top left

Section headings: Please use the same section headings as in your final projects' .ipynb file

- Background. This should motivate your objective. No extraneous information.
- Objective. This should be concise and clear! Make sure the prediction problem is well-stated and your audience is on the same page with what you're trying to do. The objective you state here needs to be clearly addressed in the Interpretation and Conclusions (even if you did not achieve your original objective).
- Data Description and Cleaning. Description should help audience understand temporality, scope, granularity and so on. Spend less time on the cleaning part for this poster.
- Forecasting and Prediction Modeling. This should summarize your approach and highlight your results. You won't have space for everything
- Interpretation and Conclusions. Circle back to your objective and motivation.

Where to print. Options, mostly recommended by others:

- Ink Stone (on Bowditch between Durant and Bancroft; up a flight of stairs). Can order online, pickup in person.
- Berkeley Scientific Visualization Center
- Copy Central and Kinko's
- There may be other non-local online printing options.
